

WEEKLY REPORT

Dear Ibrahim Ali

In the below Table you will see a specified table that includes the good, the bad & the improvements that can be done on your Classification Task

Correctly Done	Can Be Improved
• Encoding • Feature Engineering • Scaling • Handle Outlier • Handle Imbalanced • Applying Algorithms	• Handle multicollinearity using drop cols iteratively with high vif or pca (not necessary to increase performance, the integrity will be) • You can apply other techniques for outlier as transformations, capping, fill by median (try and determine the good one) • You can try encoding using one-hot, label or manual encoder as type1:1, type2:2,... • You can apply robust algorithm as random forest, adaboost,... • You can apply cross-validation to know genera performance of model on all data • Split data into train and test before any preprocessing
